LANGUAGES

English, Hindi & Bengali

Kayako, Gurgaon — Senior Product Engineer

OCT 2013 - OCT 2016

- Member of the product development team responsible for end-to-end development of the features of the product (www.kayako.com).
- Built the Avatar micro-service that lets the application upload & display user-provided pictures to & from a central database.
- Enhanced the product's usability by building a push notification microservice for the Android and IOS applications.
- Designed and implemented various Restful APIs for the product along with developer friendly documentation for the same.
- Redesigned the language parser engine responsible for parsing the available locales in the system.
- Authored technical documentation with high level design documents including wireframes, entity relationship diagrams, data flow diagrams along with complete documentation of the features implemented.
- In addition to my normal duties I also worked as a release manager and was responsible for managing daily releases of the features developed by the engineers.
- Taken the initiative and introduced writing test cases using PHPUnit. Also mentored the team members on writing fail safe test cases covering a minimum of 95% code coverage.

SendInBlue, Noida — Project Lead

OCT 2012 - OCT 2013

- Worked as a Team lead for an email marketing software (www.sendinblue.com), where I managed the PHP team, promoting the creation of elegant, practical solutions to meet the company's business goals.
- Analyzed system specifications and translate system requirements to task specifications for team members.
- Redesigned parts of the existing file import feature making it more stable, reliable and fast.
- Resolved technical issues that are escalated by junior and mid-level developers.
- Worked closely with the Project Manager to assist in the analysis, evaluation and recommendation of new features.

Monsoon Consulting, Jaipur — *Project Lead*

SEPT 2010 - SEPT 2012

- Guided the team in defining technical architecture of the projects, including working with them to finalize the DB schema.
- Translated software requirements into workable programming code, maintain and develop programs for the clients.
- Authored technical documentation with high level design documents.
- Responsible for breaking down program specification into its simplest elements and translating this logic into a programming language.
- Responsible for integrating the front-end elements built by co-workers into the application.
- Took to initiative to write a shell script that would automate the database deployment process by hooking it up with the SVN server post commit hooks.

Tulleeho, New Delhi — *Web Developer*

OCT 2006 - SEPT 2010

- Responsible for designing and developing dynamic applications from scratch to be consumed by the company for their internal needs.
- Responsible for troubleshooting, testing and maintaining the in-house products and databases to ensure strong optimization and functionality
- Took the initiative to build the company group website to maintain the team spirit.
- Responsible for keeping track of the website visitors, integrated website analytics tools to accomplish the same.
- Managed updating of content on the official website on regular basis.
